Dear Sir or Madam,

Further to Andrea Keller's first notice of Friday 28 August (your claim no. PIQ-S-2026-082814, policy PIQ-CH-KMU-2026-048213), please find attached our signed claim form (Schadenmeldung) and six photos.

Demo map anchor: Steinberggasse 23, 8400 Winterthur. The address is real; the business, premises and loss are fictional. AI images do not depict the actual building or its occupants. Street View shows the real location, not these damage scenes.

Our provisional consolidated loss estimate amounts to CHF 1,697,400.00:
- Building items: shop window glazing, workshop skylight, awning and facade panels: CHF 184,000.00
- Stock in the shop and storeroom (pralines, bars, autumn and Christmas stock, packaging): CHF 312,500.00
- Refrigerated goods in the cold room: CHF 96,400.00
- Production equipment (two tempering machines, enrobing machine, cooling tunnel, moulding line): CHF 486,000.00
- Shop fittings (counter, display cases, chilled display, lighting, till system): CHF 168,000.00
- Business interruption, September to December 2026 (Christmas season): CHF 398,000.00
- Clean-up, disposal, emergency glazing and drying: CHF 52,500.00

A few points for your assessment:

1. The main fuse tripped during the storm; the emergency electrician additionally isolated the supply on 28 August at 11:30. Power was restored on 29 August at 15:00. The photo at 15:04 shows a 23.8 °C readout shortly after restoration. We report the refrigerated contents as lost because of the interrupted cold chain, subject to temperature-record and food-safety review. We understand that our policy may not include the refrigerated goods extension; as the power cut was a direct consequence of the hailstorm, we ask you to consider this loss as part of the storm damage.

2. The property management has also reported the building damage to the GVZ (GVZ claim no. 2026-08-4471). We renewed the shop window and the skylight ourselves in 2019 as tenant improvements, which is why we include them here.

3. The photo dated Wednesday 26 August (18:34) shows selected shop-window stock two days before the storm. It is not damage evidence or proof of the complete inventory.

Photographic evidence and limits:
The photos show selected stock and damage, not the full inventory or its value. In the scenario the awning was retracted before the storm. Wind-driven hail struck the exposed facade obliquely from above. The laminated glazing in the shop window and rooflight is cracked but retained on its interlayer: no punched-out holes or open glass breaches.
Reported water ingress is through storm-loosened frame joints, not solid glazing. Wet tracks are local to the shop-window corner and one rooflight-frame joint in the single-storey rear annex; the cause and extent of leaks require technical assessment. No external emergency cover is present at 11:26. The tempering bowl has its normal closed food-protection lid; stock, pralines and ingredients are in closed packaging, showcases or covered containers. Cracked glass alone does not establish contamination of all stock.
One tempering machine is externally wet; the reported short circuit and repair scope of all equipment require technical assessment. The hail ruler is an illustrative size reference, not a calibrated measurement.
The cold-room photo shows selected stock and a 23.8 °C readout shortly after power restoration, not the

temperature history or microbiological proof of spoilage. Cartons in the intact cold room are dry. The insured reports refrigerated-stock loss because of the interrupted cold chain; temperature records and food-safety assessment remain necessary.
All amounts are provisional demands. Inventory lists, technical reports, temperature records, quotes and business records are not attached.

Inventory lists as at 31 July 2026, our September to December sales figures for 2024 and 2025 and the contractors' quotes will follow by 11 September.

Thank you for scheduling the loss adjuster's visit on Friday 4 September 2026 at 09:00; we will be on site.

Kind regards,

Daniel Hartley
