Dear Sir or Madam,

Demo map anchor: Mühlentalstrasse 185, 8200 Schaffhausen. The address is real; the business, premises and loss are fictional. AI images do not depict the actual building or its occupants. Street View shows the real location, not these damage scenes.

Further to Martina Gerber's first notice of 28 August and the visit of your loss adjuster, Mr Thomas Wyss, on 31 August (your claim no. PIQ-S-2026-082853, policy PIQ-CH-KMU-2026-071506), please find attached our signed claim form, the cost estimate and the ten photos.

Our consolidated loss estimate amounts to CHF 14,968,600.00:
- Movements in assembly, haute complication workshop: 312 calibres (incl. 38 tourbillons, 21 minute repeaters and 64 perpetual calendars): CHF 3,960,000.00
- Components and semi-finished parts (main plates, bridges, wheels, hairsprings, jewels) in the clean room and the assembly store: CHF 1,240,000.00
- Finished watches in final inspection: 186 water-exposed watches in gold and platinum cases (internal damage subject to inspection): CHF 3,540,000.00
- Dials, hands and sapphire crystals in the final assembly store (incl. 64 grand feu enamel dials): CHF 610,000.00
- Parts manufacturing machines: two five-axis machining centres (controls and electrical cabinets), a wire EDM machine and a laser welding station: CHF 2,260,000.00
- Watchmaker benches, microscopes, timing machines and tools (workshop, final inspection); mobile laminar-flow benches in the clean room: CHF 690,000.00
- Measuring and test equipment (optical measuring machine, water-resistance tester, rate testing installation) and IT in the workshop: CHF 420,000.00
- Business interruption: loss of gross profit and extra costs until the workshop and the clean room restart (planned 30 November 2026): CHF 2,150,000.00
- Emergency measures and clean-up for the contents (water extraction, drying, protective covers, disposal): CHF 98,600.00

Photographic scope and limits:

The photos show selected areas, not a complete inventory: two assembly stations and two damaged panes in one rooflight section, three movements in close-up, four finished watches lying in a flat work tray, one open machining centre and six bagged sample parts numbered 1001 to 1006. The next-day atelier view shows two dehumidifiers and one air mover after loose glass and instruments were removed.

The torn insulation visible on the flat roof belongs to the opaque roof assembly, not the rooflight glazing. The atelier's opaque interior linings remain closed; water-damaged ceiling tiles have fallen in the lower-floor rooms. Rain and residual water continued entering and draining after the peak gusts. Emergency roof covering started at 14:30; the 14:32 photo shows work in progress, not completed sealing. The atelier's two damaged panes are covered in the next-day view. Drying equipment uses a separate protected supply. Room lighting is restored for the 31 August visit; the inspected machining centre remains isolated.

Exterior droplets do not establish moisture inside sealed cases. The photos do not establish irreparability, precious-metal fineness or repair costs. The reported totals of 312 calibres, 186 finished watches and 24

workstations cover the wider inventory, not just the objects visible in these photos. Other stock, machines and business interruption are not fully photographed. The inventory lists and technical inspection reports, supplier quotes and business records must support the claimed quantities, repair scope and valuation; these records are available on request, not included in the attached files. The repair allowance, including the proposed watch revisions, remains subject to the loss adjuster's technical and financial review.

For your assessment:

1. The building damage (roof, skylights, ceilings and the clean-room envelope) is handled by the cantonal building insurer GVSH under claim no. SH-2026-0912 and is not included. The emergency roof cover is invoiced to the GVSH.

2. Movements, components, finished watches and dials are valued at manufacturing cost under AVB A3.1, not at retail prices. Machines and equipment are valued at replacement cost based on the suppliers' quotes and their diagnosis of 2 September.

3. The inventory was counted with our statutory auditors on 29 and 30 August; every movement is traced by its serial number in our ERP. The damaged parts are kept numbered and packaged for your loss adjuster.

4. Our contents sum insured of CHF 62,000,000.00 exceeds the insurable value of CHF 57,860,000.00 at 30 June 2026, the business interruption estimate stays within the CHF 36,000,000.00 sum insured, and the clean-up costs within the CHF 100,000 first-loss limit.

5. We note the Elementar deductible of CHF 50,000.00 (10 %, capped). The resulting estimated net is CHF 14,918,600.00, subject to coverage, damage-scope and valuation review.

6. To limit the interruption, final assembly moved to our south workshop on 14 September; the haute complication workshop and the clean room are planned to restart on 30 November 2026.

The inventory lists, the suppliers' quotes, the restoration company's invoice, our 2026 budget and our 2024 and 2025 accounts are available on request.

Kind regards,

Helen Marsh
